Paul Kreitman, *Japan's Ocean Borderlands: Nature and Sovereignty* (Cambridge Oceanic Histories) Cambridge: Cambridge University Press, 2023.

doi:10.1017/9781108779241

Desert islands are the focus of intense geopolitical tensions in East Asia today, but they are also sites of nature conservation. In this global environmental history, Paul Kreitman (Columbia University, New York) shows how the politics of conservation have entangled with the politics of sovereignty since the emergence of the modern Japanese state in the mid-nineteenth century. Using case studies ranging from Hawai'i to the Bonin Islands to the Senkaku (Ch: Diaoyu) Isles to the South China Sea, he explores how bird islands on the distant margins of the Japanese archipelago and beyond transformed from sites of resource extraction to outposts of empire and from wartime battlegrounds to nature reserves. This study examines how interactions between birds, bird products, bureaucrats, speculators, sailors, soldiers, scientists and conservationists shaped ongoing claims to sovereignty over oceanic spaces. It considers what the history of desert islands shows us about imperial and post-imperial power, the web of political, economic and ecological connections between islands and oceans, and about the relationship between sovereignty, territory and environment in the modern world.

Employment and Fellowships

The Interdisciplinary Centre for Science and Technology Studies,

University of Wuppertal (Germany) invites applications for:

Assistant Professorship (W 1) for “History of Science and Technology”

Application deadline: 23 October 2023

We expect you to be familiar with the concepts and methods of current history and technology of science. In addition, preference will be given to candidates with a specialisation in the history of technology or environmental history as well as in the history of technological knowledge and material culture with a special focus on gender aspects. The position will be based in the history department and teaching will take place as part of the curriculum of the history department. The successful candidate is expected to actively contribute to the Research Training Group 2696 “Transformations of Science and Technology since 1800”, and to the work of the IZWT. In particular, we expect the capability to combine historical, philosophical and sociological perspectives and the willingness to actively cooperate with the social sciences as well as with the departments of science and engineering at Wuppertal University.

Requirements:

- A university degree, e.g. in history of science and/or technology, history
- A particular aptitude for scientific work, usually demonstrated by the outstanding quality of a respective doctorate
- Suitability for teaching, which is proven by appropriate previous experience or demonstrated by excellent performance during the appointment procedure
- A record of relevant empirical research and publication activities (in particular articles in peer-reviewed journals)
- Experience in attracting external funding to support research projects as well as active participation in research programmes
- International orientation (e.g. stays abroad, international contacts, international lectures or publications)

The successful candidate helps to realise the equality of men and women at the University.

Reference code: **P23009**

Applications, including a CV, copies of certificates, a list of publications and a list of previous teaching experiences, should be addressed to Prof. Dr. Volker Remmert and solely submitted via the online portal of the University of Wuppertal: <https://stellenausschreibungen.uni-wuppertal.de>.

Kindly note that incomplete applications will not be considered.

The University of Wuppertal is an equal opportunity employer. Applications from persons of any gender are highly welcome. In accordance with the Gender Equality Act of North Rhine-Westphalia women will be given preferential consideration unless there are compelling reasons in favor of an applicant who is not female. The same applies to applications from disabled persons, who will be given preference in the case of equal suitability.

Seven urgent actions to prevent the extinction of the critically endangered Leadbeater's possum (*Gymnobelideus leadbeateri*)

Dan Harley and Dan Harley

The conservation of the critically endangered Leadbeater's possum is examined and several gaps identified in the recovery program, which lacks stated targets or coordination. Logging, bushfire and climate change pose significant threats. Seven urgent actions, including the cessation of logging, are recommended to prevent the extinction of this forest-dependent species.

Not just a flash in the pan: short and long term impacts of fireworks on the environment

Philip W. Bateman, Lauren N. Gilson and Penelope Bradshaw

Fireworks displays are spectacular but have a dark side. Most people are aware that fireworks can scare our pets, but their effect – both short and long term – on wildlife and the environment, and on our health, can be enormous.

Fireworks produce not just lights and noise, which can scare breeding and migrating birds and other animals, but also deposit pollutants into air, plants and water. It's time for something new.

Community-driven shark monitoring for informed decision making: a case study from Fiji

C. A. Ward-Paige, H. Sykes, G. J. Osgood and J. Brunnschweiler

To better understand and protect sharks and the sites used by the dive tourism industry in Fiji, divers monitored 592 sites over 5 years, providing 146 304

shark observations from 11 species on 30 668 dives. We provide the first spatio-temporal description of the occurrence and abundance of sharks by species across Fiji, and demonstrate the value of community-led partnerships.

Distress responses during handling in urban and exurban banding, the New Holland honeyeater (*Phylidonyris novaehollandiae*), in southwestern Western Australia

M. Pearmain-Fenton, L. N. Gilson, B. J. Saunders and P. W. Bateman

This study explored how urbanisation affected the behaviours of a common Australian honeyeater in response to mist-netting. Of the five responses evaluated, only breathing rate provided a clear indicator of distress at handling that differed significantly between sites in/near cities and those in rural areas. We suggest that urban birds exhibited lower breathing rates due to chronic overstimulation in response to their urban lifestyles, which then prevented individuals from further elevating breathing rates in response to antagonistic stimuli of capture and handling.

Identifying hypotheses for drivers of decline of the bogong moth (*Agrotis infusa*)

Peter Caley

Discovering why bogong moth populations are in decline is critical to guide recovery actions. Prioritising which of the numerous hypothesised drivers of decline are worth retaining for further investigation is valuable, and this paper does this in a structured way. Considerable uncertainty remains around the driver(s) of more recent declines, and designed experiments are needed to address this.

New and Forthcoming Books and Chapters

AUSTRALIAN LONGHORN BEETLES (COLEOPTERA: CERAMBYCIDAE) VOLUME 3

Subfamily Prioninae of the Australo-Pacific Region

Australian Longhorn Beetles Series

Adam Slipinski, Roger de Keyzer, Mengjie Jin

Hardback - December 2023 - AU \$180.00

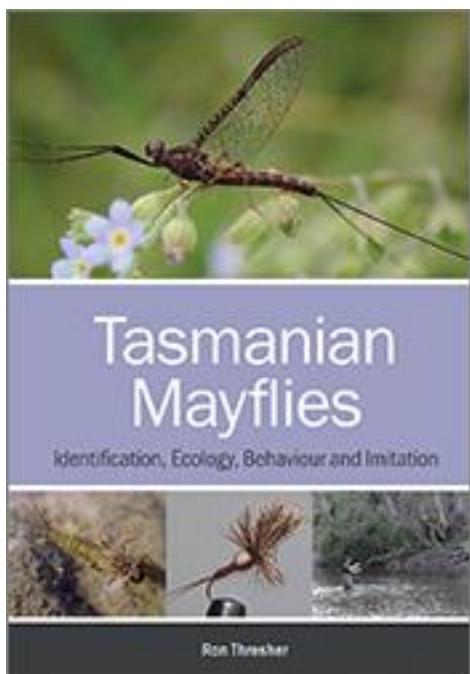

Diagnoses and describes 50 genera and 166 species of the Australo-Pacific Prioninae.

Longhorn beetles — Cerambycidae — are one of the most easily recognised groups of beetles, a cosmopolitan family that encompasses more than 33,000 species in 5,200 genera worldwide. Out of the 117 beetle families occurring in Australia, Cerambycidae is the sixth largest, comprising more than 1,400 species classified in 300 genera.

Virtually all Cerambycidae feed on living or dead plant tissue and play a significant role in all terrestrial environments. Larvae often utilise damaged or dead trees for their development, and through feeding on rotten wood, form an important element of the saproxylic fauna, speeding nutrient and energy circulation in these habitats. Longhorn beetles can cause serious damage by sometimes feeding on and eventually killing living forest or orchard trees. Many species are listed as quarantine pests because of their destructive role to the timber industry, such as the European house borer introduced into Western Australia.

This third volume in the series on Australian longhorn beetles extends to include the taxonomy of genera and species of the subfamily Prioninae of the Australo-Pacific Region. Seven tribes, 50 genera and 166 species are included. All genera and most species are diagnosed, described, illustrated and included in keys to their identification.

TASMANIAN MAYFLIES

Identification, Ecology, Behaviour and Imitation

By: **Ron Thresher**

Paperback - September 2023 - AU \$59.99

eBook - September 2023 - [eRetailers](#)

Essential reference on Tasmania's diverse mayflies, ideal for aquatic biologists and flyfishers.

Mayflies are one of the world's most diverse, abundant and important aquatic insects. Famous for their brief adult life spans, mayflies play a key role in the ecology of aquatic and associated terrestrial ecosystems, and are critical bioindicators of ecosystem health.

Sitting at the southern limit of Australia's temperate zone, Tasmania is home to a diverse array of mayflies and renowned fisheries based on them. The state's storied 'Lambda Dun' hatches bring fishers from all over Australia to try their luck each summer on its rivers and ponds. Yet little is known about their behaviour and ecology, and more than half of the mayflies in Tasmania have never been described.

This extensively illustrated book is the first synthesis of the biology of south-east Australia's mayflies, with a focus on those in Tasmania. It combines information gleaned from scientific literature as well as more than 30 years of the author's studies and flyfishing experiences. It explores the biology, identification, conservation, ecology and behaviour of mayflies, and also includes fishing strategies and fly patterns.

Tasmanian Mayflies is an essential information source for Australia's aquatic biologists and for flyfishers, novice and experienced alike, who chase the insects and the fish that feed on them.

<https://doi.org/10.1111/aen.12666>

Abstract

Tarantulas (Araneae: Theraphosidae) are one of the most diverse and widespread families of mygalomorph spiders, with over 1000 species recognised globally. While tarantulas can be found across most of mainland Australia, from arid regions to tropical forests, the Australian fauna are not yet well characterised. There are currently only 10 nominal species, up to 8 of which are currently recognised as distinct species. Here, we aim to undertake the first continent-wide assessment of species diversity of tarantulas in Australia using an iterative, hypothesis-testing approach. We apply a biological species concept and use DNA sequence data from three independent loci to delimit putative species based on evidence of lack of gene flow. First, we use the mitochondrial DNA marker *16S* to identify a set of putative species hypotheses. We then test each hypothesis under the expectations of neotypy, allotypy and allophyly using two independent nuclear loci, *EF1 γ* and *28S* rRNA. Genealogically exclusive lineages are inferred using haplotype networks for each nuclear locus, interpreted to represent non-interbreeding entities and hence represent distinct biological species. We find evidence for there being at least 20 distinct biological species of tarantula in Australia, with the highest species richness in northern Australia. Our results are in line with other DNA-based studies of Australian mygalomorphs that have uncovered undescribed species diversity. Given the low number of samples included here, there is likely to be an even greater species diversity of tarantulas in Australia.

Miriam A. Slodownik, Ignacio Escapa, Chris Mays, Gregory J. Jordan, Raymond J. Carpenter, and Robert S. Hill, *Araucariooides: A Polar Lineage of Araucariaceae with New Paleogene Fossils from Tasmania, Australia,*"

International Journal of Plant Sciences

Abstract

Premise of research. The fossil assemblage of the Macquarie Harbour Formation (MHF) in Tasmania, Australia, represents a subpolar (65°S–70°S) lowland forest during the early Eocene climatic optimum (~53–50 Ma) and bears fossils of *Araucariooides linearis* Bigwood et Hill, [1985](#) emend (Araucariaceae). New fossils, including isolated leaves, female ovuliferous complexes (=bract/scale complexes), a possible seed, and dispersed pollen, were recovered from the Lowana Road site near the type locality and offered the opportunity to clarify the previously poorly constrained relationship of *Araucariooides* within the Araucariaceae.

Methodology. Macrofossils and cuticles were described and compared with other Araucariaceae. Palynological analyses were conducted to identify associated pollen. Tree Analysis Using New Technology (TNT) was used for phylogenetic analyses. To confirm conspecificity of leaves and reproductive remains, the whole-plant hypothesis was tested using multiple methods, including optical and fluorescence photo(micro)graphy, scanning electron microscopy, and X-ray computed tomography. Paleobiogeographic comparisons with other *Araucariooides* assemblages were undertaken.

Pivotal results. New *Araucariooides linearis* fossils included two distinct leaf populations and the first putative female reproductive remains of this species. The generic and specific diagnoses of *A. linearis* were emended based on new data. Co-occurring *Araucariooides sinuosa* was designated a junior synonym of *A. linearis*. The fossils are associated with abundant *Dilwynites tuberculatus* pollen. The phylogenetic analyses revealed affinity with the agathiod clade (*Wollemia + Agathis*) of Araucariaceae. The whole-plant hypothesis was supported.

Conclusions. Phylogenetic analyses indicated that *A. linearis* was a non-*Agathis* agathiod that represents the sister to the clade formed by *Agathis* and *Wollemia*. The polar Campanian *Araucariooides falcata* in New Zealand supports the Cretaceous divergence

of *Araucaria* and agathiod lineages. The restriction of *Araucariooides* to high paleolatitudes and their adaptations to seasonal environments such as broad leaves and possibly winter deciduousness may have facilitated survival through the impact winter and photosynthetic crisis during the end-Cretaceous extinction. Continuous northward movement of Australia and New Zealand and resulting climatic and light regime changes likely contributed to its extinction.

Xiujian Ding, Tianze Gao, Xianzhang Yang, Zhenping Xu, Changchao Chen, Keyu Liu, and Xuequi Zhang, "Jurassic Paleoclimate Reconstruction and Its Influence on Organic Matter Enrichment in Kuqa Depression, Tarim Basin," *The Journal of Geology* 120:6

Abstract

The Tarim Basin is the most important oil and gas basin in western China. The paleoclimate of the Jurassic Period in the Tarim Basin remains poorly understood, and research on the enrichment of organic matter in coal-measure source rocks is relatively scarce. Therefore, to reconstruct the Jurassic paleoclimate and its influence on the enrichment of organic matter in coal-measure source rocks, we studied 13 samples from nine wells in the eastern Kuqa Depression of the Tarim Basin. We found that the corrected chemical index of alteration (CIA*), the chemical index of weathering, the plagioclase index of alteration, $\text{In}(\text{Al}_2\text{O}_3/\text{Na}_2\text{O})$, and Na/K can characterize the degree of chemical weathering in the study area. The degree of chemical weathering during the Jurassic period was high and declined gradually, indicating that the paleoclimate was relatively warm and humid, progressively changing to hot and dry. Paleoclimatic parameters composed of hydrophilic and hydrophobic elements indicate climate fluctuation. The parameters Ca/Mg, Fe/Mn, and Rb/Sr indicate the paleoclimatic changes in warmth and humidity in the study area. The Yangxia Formation in the Early Jurassic was found to be relatively hot and dry, whereas, in the Late Jurassic, the Qigu Formation experienced a severe hot and dry event. The cross plot of CIA* and total organic carbon (TOC) showed that samples with higher TOC content exhibit a higher degree of chemical weathering, indicating that the overall warmth and humidity played an important role in controlling the accumulation of organic matter in coal-measure source rocks. It was found that when the overall climate was warm and humid, a relatively hot and dry climate was conducive to the enrichment of organic matter in coal-measure source rocks.

Russell L. Barrett and Matthew D. Barrett, "Taxonomic Revision of Australian *Erythrophleum* (Fabaceae: Caesalpinioideae) Including Description of Two New Species," *Australian Systematic Botany* 36:5 (2023), 401-426.

Ironwood, *Erythrophleum chlorostachys*, is an iconic legume tree in the northern Australian savanna, with relatives in Asia and Africa. Fieldwork across northern Australia has discovered two new species, one from around The Great Sandy Desert, and one spanning from the west Kimberley to Cape York. Recognition of three distinct species, on the basis of morphology and DNA data, has implications for the conservation and utilisation of this genus, significant in indigenous cultures in northern Australia. Abstract

Context

Swimming crab is a vital fishery resource and a valuable source of income in the southern East China Sea, but it lacks management strategies, especially when using different fishing gear.

Aims

This study aimed to determine the effects of spatial-temporal conditions and vessel capacity on swimming crabs by using different fishing-gear types in the Taiwan Strait (TS).

Methods

We used generalised linear mixed models (GLMMs) to investigate data from Taiwanese vessels (2011–2019) on how spatial-temporal conditions and vessel capacity affected the catch of swimming crabs when using trawls, gill-nets and traps.

Key results

The results showed that the traps (>80.0%) caught more swimming crabs in the TS than did the gill-nets (6.6%) and trawls (8.0%). Additionally, the GLMM analysis showed that *Charybdis feriatus*, *Portunus pelagicus* and *Portunus sanguinolentus* catches by traps and trawls were significantly affected by different fishing locations, climate events, work hours and vessel sizes. However, for gill-nets, spatial-temporal conditions and vessel capacity did not affect the catch of *C. feriatus*.

Conclusions

Monitoring fishing efforts and environmental factors is vital to understanding their impacts on marine ecosystems.

Implications

These findings enable future sustainable crab fishing through harvesting strategy planning, ecosystem management and spatial-temporal governance.

Seminars and Lectures

Ocean Humanities International Lecture Series

The German Maritime Museum announces the new “Ocean Humanities International Lecture Series.” Lectures take place once a month, in person and via Zoom. Some events are in German, some in English. For more information:

Conferences and Meetings

[DHST] 27th ICHST 2025 Call for symposia proposals now open

External Dear colleagues,

Dear representatives of members, commissions and sections,

I am very happy to forward to you the /Call for Symposia/ of the ICHST 2025 congress in New Zealand. Please do not hesitate to share this call

widely in your own local and global communities.

The Organizing committee, chaired by Hugh Slotten, is doing a wonderful work and we are very much looking forward to the congress,

with best wishes,
Liesbeth

CALL FOR SYMPOSIA PROPOSALS NOW OPEN

The organizing committee invites you to submit a Symposia to be considered for presentation at the conference in Ōtepoti Dunedin, 29 June - 5 July 2025.

We invite Symposia submissions on any topic in the history of science, technology and medicine, but we especially encourage proposals that address aspects of the conference theme, across all periods, and from a variety of methodological and historiographical approaches.

Symposia proposal submissions will close on Monday 1 April 2024.

The theme of the 27th ICHST is “*Peoples, Places, Exchanges, and Circulation*.”

For more information and to download your symposia proposal template, please visit the *conference website.*

KEY DATES

Call for submission of symposia proposals Now open

Deadline for submission of symposia proposals 1 April 2024

Call for stand-alone papers opens 1 April 2024

Registration opens 11 July 2024

Deadline for submission of stand-alone paper proposals From 1 October 2024

Deadline for submission of paper abstracts within symposia From 1 November 2024

Early bird registration closes 3 April 2025

Program released online From 1 May 2025

Final date for registration 1 May 2025

Congress opens 29 June 2025

[https://urldefense.com/v3/_!PvDODwIR4mBZyAb0!UbPYrA8K1FsndPvV1SSaG-8gWAHPi90eMNDhtuoZtFCy0L04q-2QlbHmu186RMLCI5hjkqsQlkBDZCMHL2U\\$](https://urldefense.com/v3/_!PvDODwIR4mBZyAb0!UbPYrA8K1FsndPvV1SSaG-8gWAHPi90eMNDhtuoZtFCy0L04q-2QlbHmu186RMLCI5hjkqsQlkBDZCMHL2U$) <[https://urldefense.com/v3/_!PvDODwIR4mBZyAb0!UbPYrA8K1FsndPvV1SSaG-8gWAHPi90eMNDhtuoZtFCy0L04q-2QlbHmu186RMLCI5hjkqsQlkBDZCMHL2U\\$](https://urldefense.com/v3/_!PvDODwIR4mBZyAb0!UbPYrA8K1FsndPvV1SSaG-8gWAHPi90eMNDhtuoZtFCy0L04q-2QlbHmu186RMLCI5hjkqsQlkBDZCMHL2U$)>

BSHS Small Conference and Workshop Grants

The British Society for the History of Science is looking to award grants of up to £500 each to conferences and workshops to be held in person this year (funds to be spent by 23rd October 2024). Awards may be used for any reasonable purpose to support running a conference, which might include catering, venue, or accessibility costs. **Please note that the society is committed to lowering its climate impact and therefore will not fund air travel.**

Applications should consist of:

1. Details of the conference including title, location, and dates of the event.
2. A short abstract detailing the intellectual agenda of the conference.
3. Details of the main organisers (including name, affiliation, and contact details).
4. Details of the conference programme where available.
5. A **balanced** budget that shows both projected income and expenditure. Please note that budgets which do not balance (i.e., budgets which do not clearly outline how expenses will be met) may be reviewed unfavourably by the panel.
6. A statement explaining how the event will adhere to aims and objectives of the BSHS and our policies and guidelines (which can be found here: <https://www.bshs.org.uk/about-society>). We would draw particular attention to our Equality and Diversity Statement and our Climate Policy.

Please complete your application using [this online form](#). All awardees will be required to provide the BSHS with a post-event report and a suitable image for publication in the society's *Viewpoint* newsletter within three months of the event.

Please submit application materials by midnight on Friday 6th October 2023. Applicants will be notified by Monday, 23rd October 2023 and monies can be used between then and the 23rd October 2024. Any questions should be addressed to the Secretary to the BSHS Conferences Committee, Grace Exley, at conference.grants@bshs.org.uk.

**Beyond the Ocean's Depths:
Revisiting the *Challenger* Expedition (1872-1876)
7 November 2023
National Maritime Museum, Greenwich, London**

This event is in part sponsored by the Department of Science and Technology Studies at University College London.

With the environmental threat of global warming, rising seas and biodiversity loss, knowledge of the ocean is more important than ever. The Challenger Expedition, named after the British Royal Navy vessel HMS *Challenger* which circumnavigated the globe from 1872 to 1876 with the aim to explore the deep sea, has been celebrated as a foundational moment in the history of modern oceanography.

Data and specimens obtained from the expedition are actively studied by scientists today and provide a historical benchmark for climate change and species distribution. Meanwhile, historians are increasingly calling for the voyage's imperial context to be recognised and are bringing attention to people and places that have previously been given little attention in the expedition's historiography. How do we tell more inclusive and holistic histories of *Challenger*, while engaging with its scientific importance today? Looking forwards, what can we learn from the past while considering the future of ocean science?

On 7 November 2023, 'Beyond the Ocean's Depths' shall provide a welcoming interdisciplinary forum for historians, scientists, coastal and island communities, and museum curators to share ideas and their work. The day will bring together a variety of perspectives, knowledges, specialisms and resources.

Conference themes include:

- The use of *Challenger* materials in modern scientific research
- *Challenger*-related materials in museum collections
- Public engagement and education
- Colonial legacies
- Untold histories
- Local knowledges and expertise
- Links between oceanography past, present and future

This one-day conference will be held in person at the National Maritime Museum, Greenwich and online. It will consist of four panels, each consisting of three 15-minute papers and a Q&A, and a guided visit to the Caird Library to view *Challenger* archives, photographs and ship plans. We will also have a keynote talk and time to view relevant gallery spaces.

The workshop will be wheelchair accessible with lift access, and the lecture theatre is fitted with a hearing loop. It will also be possible to give presentations remotely, and we anticipate that overseas submissions will be delivered online (unless rail travel to the UK is available). This is to support the Museum's ambitions to be carbon emissions conscious. The workshop language is English.

If you have any queries, please contact the organisers at research@rmg.co.uk.

First International Conference of the Histories of *Upcoming* Anthropologies: Doing Histories, Imagining Futures

The History of Anthropology Network (HOAN) of the European Association for Social Anthropology is happy to announce a call for papers for the First International Conference of the Histories of Anthropologies, Doing Histories, Imagining Futures, to be hosted by the University of Pisa, Italy.

The event will be held on-line between 4-7 December 2023 and it is collaboratively organised by key stakeholders in our field to discuss methodological, theoretical, pedagogical, and ethical aspects of the histories of anthropologies.

Please browse the Conference Website and Panels to discover more!

<https://hoaic.cfs.unipi.it/>

<https://hoaic.cfs.unipi.it/panels/>

This is an exciting opportunity for everyone working in the field of history of anthropology to gather and learn from each other and set new directions for the field. You are warmly invited to join us and submit a paper proposal.

The panels are:

Panel 1: Doing Histories of Anthropologies. Theories, Methodologies, Practices

Panel 2: Disciplinary Histories and Archives in Anthropology, Folklore, and Oral History: Actors, Formats, and Mediality in Knowledge Production

Panel 3: Historicizing Anachronistic Motives

Panel 4: History's Lessons: Uses of the History of Anthropology

Panel 5: Pushed out, excluded and forgotten? Recovering anthropologists, ethnologists, and folklorists for the history of our discipline

Panel 6: Approaching the Present through Anthropology's Past

Panel 7: Regional Anthropologies, Colonial and Postcolonial Histories

Panel 8: Missing Others. Eluded Encounters and Hidden Contributions within the History of Anthropology

Research Unit in Enlightenment, Romanticism, and Contemporary Culture

Inventing the Human

Conference, conversations, provocations, roundtables, and exhibition

30th November to 2nd December 2023

University of Melbourne (f2f and virtual)

Call for Papers

This interdisciplinary and hybrid conference sets out to place the (liberal-humanist) subject dispatched by posthumanism inside the much larger field of Enlightenment/Romantic thought on this topic—a field that, on the one hand, is no longer imagined as beginning and ending in Europe and, on the other hand, is always already in dialogue or conflict with non-European traditions, understandings, and discourses of the human. We take as our key themes the pasts, futures, and varieties of reason, imagination, liberty, and the body—terms crucial to modern understandings of the human. But we do this in order to ask, in a world where Europe is merely one centre among many, what of this legacy can be dispatched? What can be revised or extended by other traditions? What in the world's multiple humanities might open new possibilities for the future? And what does our answer to these questions mean for the methods, roles, and organising categories of the Humanities?

Confirmed Keynote Speakers / Provocateurs:

[Genevieve Bell](#), Director of the School of Cybernetics; Director of the 3A Institute (3Ai);
Florence Violet McKenzie Chair at the Australian National University; a Vice
President and a Senior Fellow at Intel Corporation.

[James Q. Davies](#), Professor of Music, University of California, Berkeley.

[Amanda Jo Goldstein](#), Associate Professor, English Faculty, University of California, Berkeley.
[Wantarri 'Wanta' Pawu](#), Warlpiri Elder; and Professorial Fellow in Indigenous Studies,
University of Melbourne, University of Melbourne.

[Delia Lin](#), Associate Professor, Chinese Studies, University of Melbourne.

[Sujit Sivasundaram](#), Professor of World History, University of Cambridge.

Topics include:

- Enlightenment-Romanticism and/or its legacies and the invention of the Human
- Indigenous, Asian, Southern Hemisphere traditions and knowledges about the human
- Re-inventing the human (or why developing an understanding of plural humanity matters)
- The pasts, futures, and/or varieties of
 - reason / critique • imagination / creativity • knowledge • literary arts / performing arts / visual arts • cosmopolitanism / worldliness • religion / faith / the secular / the post secular • the body • place • tradition

--- or topics not included in this list important for a particular tradition on the human.

- Life writing / Writing about the human
- Ability / disability / differently abled
- Gender / transgender / non-binary
